USE CATEGORIES

[Use Categories in Sections 22.010 – 22.370 added by Ord. 5555, 2/7/03]

22.010 Introduction to the Use Categories. This section classifies land uses and activities into use categories based on common functional, product, or physical characteristics. The use categories provide a systematic basis for assigning present and future uses to zones. The decision to allow or prohibit the use categories in the various zones is based on the zoning district purpose statements.

The Schedules of Permitted Uses (by zoning district), special conditions and the development standards are located in Article 3, Residential Zoning Districts; Article 4, Commercial and Industrial Zoning Districts; and Article 5, Mixed Use Village Center Zoning Districts. The environmental performance standards in Article 9, On-site Development and Environmental Standards, may limit the placement of certain uses in some zoning districts.

22.020 Description of Use Categories.

- (1) Considerations. Uses are assigned to the category whose description most closely describes the nature of the primary use. Each use category is described and defined. Developments may have more than one primary use. Developments may also have one or more accessory uses. The following are considered in determining what category the use is in, and whether the activities constitute primary uses or accessory uses:
 - The description of the activity(ies) in relationship to the characteristics of each use category;
 - The relative amount of site or floor space and equipment devoted to the activity;
 - Relative amounts of sales from each activity;
 - The customer type for each activity;
 - The relative number of employees in each activity;
 - Hours of operation;
 - Building and site arrangement;
 - Vehicles used with the activity;
 - The relative number of vehicle trips generated by the activity;
 - Signs;
 - How the use advertises itself; and
 - Whether the activity would be likely to be found independent of other activities on the site.
- (2) Developments with multiple primary uses. When all of the primary uses of a development fall into one use category, the development is assigned to that use category. For example, a development that contains a retail bakery and a café would be classified in the Retail Sales and Service category because all of the primary uses are in that category. When the primary uses of a development fall into different use categories, each primary use is classified in the applicable category and is subject to the regulations for that category.
- (3) Accessory Uses. Accessory uses are incidental to the primary use category and may contribute to the comfort, convenience, or necessity of the principal use. Examples of accessory uses include but are not limited to storage, employee and customer parking, and employee facilities. These uses are allowed by right in conjunction with the use unless stated otherwise in the regulations. Unless otherwise stated, they are subject to the same regulations as the primary use. [Ord. 5742, 7/14/10]

Lists of accessory uses were deleted from the use categories in Sections 22.030 to 22.370 by Ord. 5742, adopted 7/14/10].

- (4) Use Examples. The “Use Examples” subsection of each use category provides a list of examples of uses that are included in the category. The names of uses on the lists are generic. They are based on the common meaning of the terms and not on what a specific use may call itself. For example, a use whose business name is “Wholesale Liquidation” but that sells mostly to consumers would be included in the Retail Sales and Service category rather than the Wholesale Sales category. This is because the actual activity on the site matches the description of the Retail Sales and Service category.

NATURAL RESOURCE OVERLAY DISTRICT DEFINITIONS

22.500 Natural Resource Overlay District Definitions. The following definitions are specific to the Natural Resource Overlay Districts in Article 6.

Conflicting Use: A land use or other activity reasonably and customarily subject to land use regulations that could adversely affect a significant Goal 5 resource.

Development Site Area: The buildable portion of a property where the development of structures and other impervious surfaces is proposed.

ESEE Analysis: An analysis of economic, social, environmental, and energy consequences, positive or negative that could result from a decision to allow, limit, or prohibit a conflicting use per OAR 660-023-0040.

Fill or Filling: The deposition of organic or inorganic material in any amount, including the temporary stockpiling of fill material, by human action.

Function: A characteristic action or role provided by a resource. Wetland functions include fish and wildlife habitat, water quality improvement, hydrologic controls, and flood damage reduction. Riparian functions include water quality, thermal regulation, flood management, and wildlife habitat.

Impervious Surface: A surface that cannot be penetrated by water, such as pavement, rock, or a rooftop, and thereby prevents infiltration and generates runoff.

Invasive Species: The Oregon Invasive Species Council defines an invasive plant as a non-native species whose introduction does, or is likely to, cause economic or environmental harm or harm to human health. While not all non-native species are invasive, the few that are categorized as such threaten the habitat of native plants. An invasive plant can spread rapidly and displace other desired vegetation. The Oregon Invasive Species Council maintains a list of recognized invasive plants.

Local Wetlands Inventory (LWI): A systematic survey of an area to identify, classify, and map the approximate boundaries of wetlands over one-half acre in size within the urban growth boundary, and supporting documentation required by OAR 141-086-0200. The inventories are approved by Oregon Department of State Lands (DSL) and adopted by the City. Any subsequent delineations or determinations approved by the DSL amend the LWI by reference.

Native Vegetation: A plant species that is indigenous to the area and identified as naturally occurring and historically found within the City of Albany. Lawn is not considered native vegetation regardless of the species used.

Natural Bottom: When a water crossing does not have a hard or paved surface. Naturally occurring soils and plants are at the bottom of the waterway.

Non-native Vegetation: A plant species that is not indigenous to the area.

Noxious Weeds: They include plants that are injurious to public health, agriculture, recreation, wildlife or any public or private property. The State noxious weed list is the official list for the State of Oregon. Maintained by the Oregon State Weed Board and Noxious Weed Control Program, the weed list is part of the noxious weed policy and classification system. The State noxious weed list is used to prioritize activities at the state level and provide direction for development of county weed lists, local control programs and guide the use of limited resources.

Ordinary High-Water Mark (OHW): A line on the bank to which the high water ordinarily rises each year and is the waterward limit of upland vegetation and soil (Source: ORS 274.005). It is generally recognizable by a visible change in the soil and vegetation.

Reference Site: A specific sampling site selected for its relatively undisturbed conditions. It is representative of the expected biological integrity of other localities along or near the same waterbody.

Riparian Corridor: A Goal 5 resource that includes the water areas, fish habitat, riparian areas, adjacent wetland, and upland areas that serve to protect water quality and the habitat functions of the water body.

Safe Harbor Goal 5 Process: An optional course of action that satisfies certain requirements under the standard Goal 5 process. For example, a jurisdiction may choose to identify “significant” riparian corridors using the safe harbor criteria outlined in OAR 660-23-0090(5) rather than follow the general requirements of determining “significance” in the standard Goal 5 process outlined in OAR 660-023-0030(4). Similarly, a jurisdiction may adopt a wetlands ordinance that meets the safe harbor requirements of OAR 660-023-0100(4)(b) in lieu of following the ESEE decision process in OAR 660-023-0040.

Sensitive-Critical Species: A species classification created under Oregon’s Sensitive Species Rule (OAR 635-100-040). The classification is applied to Oregon’s naturally reproducing fish and wildlife species, subspecies, or populations that are facing one or more threats to their population and/or habitats. The subcategory critical has the following meaning: “Critical” sensitive species are imperiled with extirpation from a specific geographic area of the state because of small population sizes, habitat loss or degradation, and/or immediate threats. Critical species may decline to a point of qualifying for threatened or endangered status if conservation actions are not taken.

Significant Wetland: A wetland identified in the Local Wetland Inventory and determined to be locally significant wetlands using the criteria in OAR 141-86-0300. These criteria include fish or wildlife habitat, hydrologic control, water quality improvement functions, presence of rare plant communities or sensitive, threatened or endangered species, or direct water connection to habitat for salmon species.

Significant Wildlife Habitat Areas: A land or water area where sustaining the natural resource characteristics is important or essential to the production and maintenance of aquatic life or wildlife populations that are listed by the state or federal governments and shown on Plate 3 of the Albany Comprehensive Plan.

Standard Goal 5 Process: The standard Goal 5 process is outlined in OAR 660-023-0030 through 660-023-0050 and consists of procedures and requirements to guide local planning for all Goal 5 resource categories. This division also provides specific rules for each of the fifteen Goal 5 resource categories (see OAR 660-023-0090 through 660-023-0230). In some cases, this division indicates that both the standard and the specific rules apply to Goal 5 decisions. In other cases, this division indicates that the specific rules supersede parts or all of the standard process rules (i.e., local governments must follow the specific rules rather than the standard Goal 5 process). In case of conflict, the resource-specific rules set forth in OAR 660-023-0090 through 660-023-0230 shall supersede the standard provisions in OAR 660-023-0030 through 660-023-0050.

Upland: Land not characterized by the presence of riparian areas, water bodies or wetlands.

Wetland: Those areas inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and which, under normal circumstances, does support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

Wetland Boundary Delineation: A determination of wetland presence that includes marking the wetland boundaries on the ground and/or on a detailed map prepared by professional land survey or similar accurate methods. A delineation approved by the Division of State Lands is required for decision-making.

Wetland Determination: An identification of an area as wetland or non-wetland. A determination that is approved by DSL is required for decision-making. [Ord. 5764, 12/1/11]
